## DETAILED ACTION

### *Allowable Subject Matter*

1. **Claims 8-26** are allowed. The following is an examiner's statement of reasons for allowance: The present invention comprises an electronic information item trading system where selection, packaging and control delivery processes are disclosed. In a selection process, selling subscriber identifies and selects content for their use and directs the remaining unwanted content to the packaging process, where the packaging process converts this unwanted electronic information item content, such as TV program, into dealpacks and list it to other subscribers in the network, where control delivery process receives payment, generate a key for the dealpack, verifies it, and then delivers the dealpack to the subscriber that purchased it. Electronic information item, such as, TV programs/channels are called dealpack. Dealpacks are not related to content such as music CD sell on e-bay since claim teaches that subscriber subscribes content, selects some content and the remaining contents are being traded with other users on the network.

The closest prior art, Herz, Kenner, and Loebbecke show a similar system. However, Herz discloses a system for scheduling the receipt of desired programs from a network, which simultaneously distributes many sources of such data to many customers in the network, Kenner discloses user terminal such as STB receives and stores video programs in the local storage unit and when second user terminal in the same computer network wants to view the program, its request is transmitted to local storage unit of the first user terminal via server, where local storage unit shares it video

program with the second user terminal, and Loebbecke discloses an electronically traded on-line delivered content is data traded on the Internet. Thus, Herz, Kenner, and Loebbecke fail to disclose the limitation(s), providing an electronic information item trading system; said trading system including: a selection process, a packaging process, and a control delivery process; providing the trading center access to a network to enable trading of the electronic information items; having at least one network operator associated with the trading system, where each of said at least one network operator has content associated with their network that is available through subscription; providing an control device for executing the selection process and the control delivery process; the system capable of supporting a plurality of users and enabling the users associated with the network operator the ability to trade content to which they subscribe, wherein users who complete the selection process are identified as selling subscribers; the selection process including: wherein when one of the selling-subscribers identifies and selects content for their use and directs the remaining content which is identified as for-not-use for trade to the packaging process; the packaging process transforming the for-not-use content into dealpacks; providing a plurality of gateways on the network, the gateways controlling the path of the dealpacks; listing the dealpacks on the trading system where the users of the trading system have access to the dealpacks; a control delivery process for delivering traded dealpacks including: receiving a payment for the traded dealpack; generating a secret key for the traded dealpack; submission and verification of the secret key; delivering the traded dealpack

to the user upon verification of the secret key, used in combination with all of the other limitations of independent claims 8 and 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
